

# STREAMING SERVICE DATA ANALYSIS

**Objective:** To analyze the distribution of streaming service users across different countries and identify meaningful insights using Microsoft Excel.

**Dataset Description:** The dataset contains user information collected from a streaming service platform. It includes user distribution across different countries and helps analyze geographical usage patterns using Excel Pivot Tables and Pivot Charts.

## Dataset Summary :

### Country Users

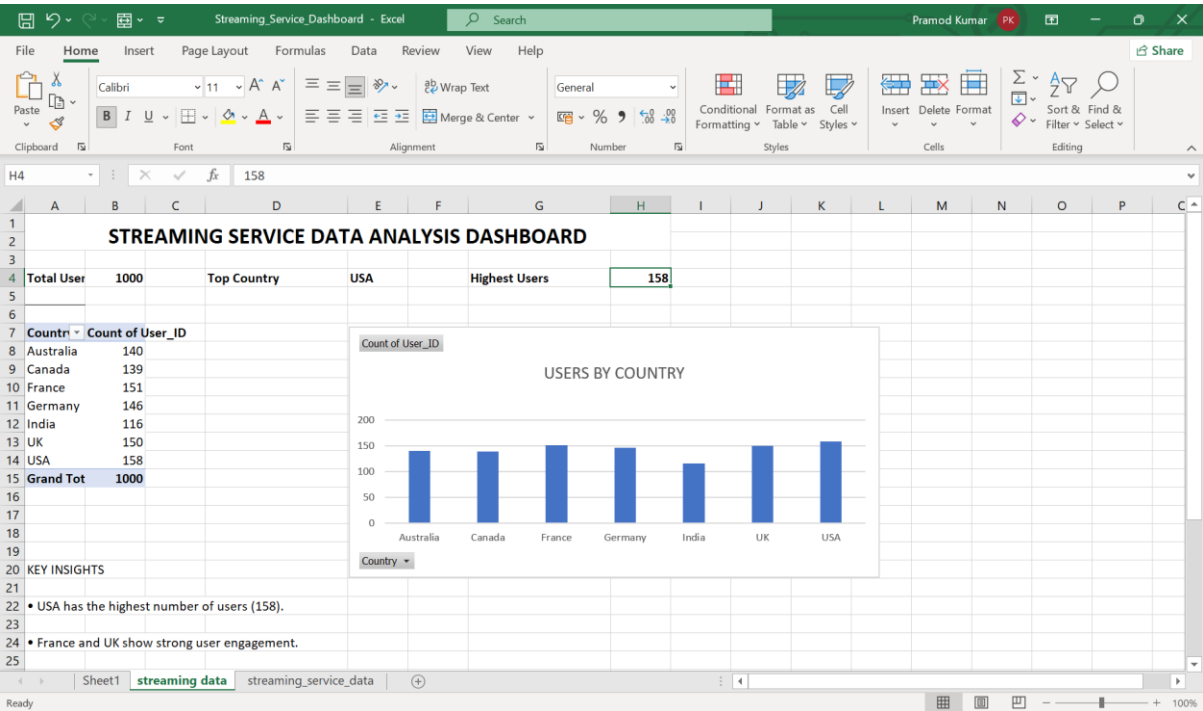

|              |             |
|--------------|-------------|
| USA          | 158         |
| France       | 151         |
| UK           | 150         |
| Germany      | 146         |
| Australia    | 140         |
| Canada       | 139         |
| India        | 116         |
| <b>Total</b> | <b>1000</b> |

## Analysis & Key Insights:

- USA has the highest number of users (158).
- France and UK show strong user engagement.
- Germany and Australia maintain stable user distribution.
- India has the lowest number of users (116).

A total of 1,000 users were analyzed across 7 countries

# Chart Represenatation:

**Conclusion:** The analysis shows that the streaming service has a strong user base in the USA, France, and the UK. Microsoft Excel Pivot Tables and Pivot Charts were used to create an interactive dashboard and generate meaningful business insights from the dataset.
